Overview Products

PRODUCT		PRODUCT BRIEF
Digital Connectivity	CBN Premier	Dedicated internet content with subs product consist of Premier (Dedicated internet), Premier plus (ASN 3787), IP Transit (ASN 4787 and ASN 38158)
	CBN Xcess SOHO	Optimal internet content include IP Static /30 with Enterprise SLA grade, this subs product categories by capacity tearing
	CBN Optima	
	CBN Clean Pipe	Dedicated line for multi content inside by Customer cost of Dark fiber, DWDM Service, MPLS, Metro Ethernet, Global ethernet, Cloud connect
	CBN Sky	Wireless VSAT Product with subs product consist of Starlink package and other VSAT provider in multi orbits (LEO, MEO, GEO) and technologies (C-Band, KU-Band, KA-Band)
Digital Platform	CBN Platform as Service	A technology platform developed in collaboration with expertise partners, produce customization product consist of integrated outputs from software, content, hardware, and services. Subs product consist of DHS (Dens Hospitality System), CBN Cloud, Hosting, Domain, LMS, Gen AI, IoT, Zoom, PMS
	CBN Collocation	Collocation product packaging with collocation provider or utilize existing collocation in Neutral DC locations
Digital Services	CBN Security as Service	Collaboration product packaging specifically for security services cover whole area network framework (connectivity, apps and endpoint), subs product consist of Anti Ddos, penetration test , SD-WAN
	CBN Appliance License	This product focus on appliance or license that required from Customer as part of initial project or extended/renewal period
	CBN Infra as Service	Basic product resell equipment
	CBN EOS Service	Professional service engineer

Digital Connectivity

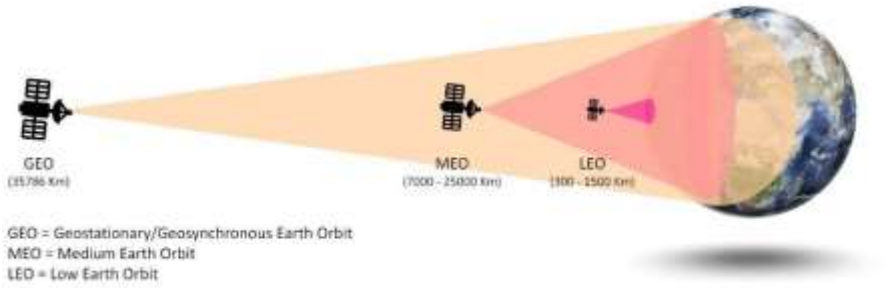
CBN Sky (Starlink)

- High-performance non-terrestrial internet service designed to deliver reliable, high-speed connectivity to businesses in urban, rural, and remote locations worldwide.
- Starlink delivers high internet speeds and low latency to users worldwide.



Clean Pipe

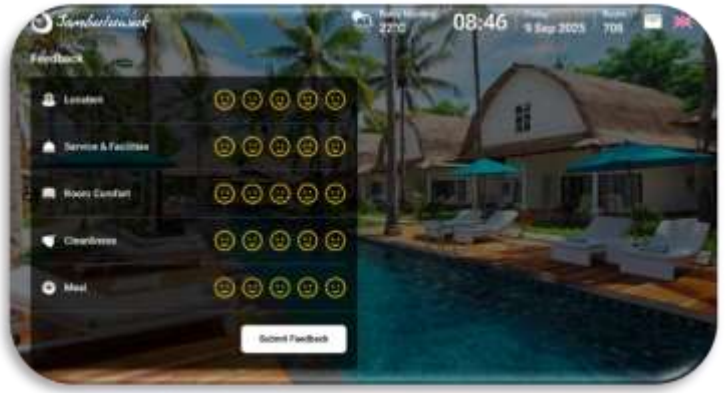
Exclusive private circuits, both point-to-point and point-to-multipoint, which guarantee full bandwidth between customer site and the service provider network. CBN Clean Pipe offers bandwidth with exclusive utilization, high reliability and low latency.

Services	Description
Basic Datacom / Localloop / Metro E	A service for delivering data from Node 1 to Node 2, or from Node 1 to multiple nodes (within Indonesia). Uses Layer 2.
Global Ethernet / IPLC	An infrastructure service that connects local networks in Indonesia to international destinations (Singapore).
Cloud Direct Connect	A service that allows CBN clients to connect directly to cloud platforms without going through the public internet.
DataFeed	A Datacom (Layer 2) service that connects to the Indonesia Stock Exchange (BEI) Router / Server.
IDREN	The Indonesia Research and Education Network (IDREN) is a dedicated network infrastructure that connects research and educational institutions and communities throughout Indonesia.

Digital Platform

CBN's Digital Platform as a Service is a **comprehensive digital ecosystem** designed to facilitate digital transformation for enterprises, extending far beyond basic internet connectivity.

Platform as a Service - DHS TV



Overview

Digdaya Hospitality Solution

DHS is a system designed to integrate televisions used in hotel rooms with special features such as hotel information services, room service ordering, and integration with hotel management systems (PMS).

Administrator System

A system for managing client data and applications in each hotel.

Client System

Service management system integrated with hotel PMS.

TV Hotel Application

STB that will be connected to the TV in the hotel room.

Platform as a Service – Zoom Workplace

A cloud-based integrated communications platform for high-quality video conferencing, voice calls, webinars, messaging, and collaboration across multiple devices and locations. Designed for businesses, educators and organizations, Zoom provides a seamless, secure and customizable communication experience. **CBN is an official partner** that sells **Zoom Workplace** solutions to its customers.

Platform as a Service - CBN Gen-AI

Gen-AI Chatbot Assistant
Gen-AI Chat Marketing
360 Omnichannel Agent
Intelligent Business Advisor
Sentiment Analysis Advisor

- Connect to website/whatsapp/chat widget
- Automate routine tasks and provide quick answers to common queries.
- Automate customer service to reduce costs, offer 24/7 personalized support with chatbots, and continuously improve with data and machine learning.

Use case vertical industry :

1, 2, 3 ,4, 5, 6, 7, 8, 9, 10, 11, 12

(whole industry required this solution to enhanced customer interaction)

Gen-AI Platform Medical Claim Management
Gen-AI for Document Management System
Gen-AI for Improvement LMS Value
Intelligent Business Advisor
Sentiment Analysis Advisor

Use case vertical industry :

1, 2, 3, 5, 6, 8, 9, 10, 11

(most of public service or massive chain store is required this solution to improve quality of business process)

Gen-AI for Hospitality Management System
Gen-AI Booking Assistant & Order Management
Autonomous Data Analyst Agent
Sentiment Analysis Advisor

Use case vertical industry :

2, 6, 9, 11

(more suitable for education, healthcare and hospitality segment

Platform as a Service - CBN IoT

The development of machine-to-machine (IoT) technology is transforming how businesses and industries automate processes, monitor, and control operations making them more effective and efficient. IoT enables seamless information exchange between devices such as machines, vehicles, control centers, and more, anytime and anywhere, without manual human interaction.

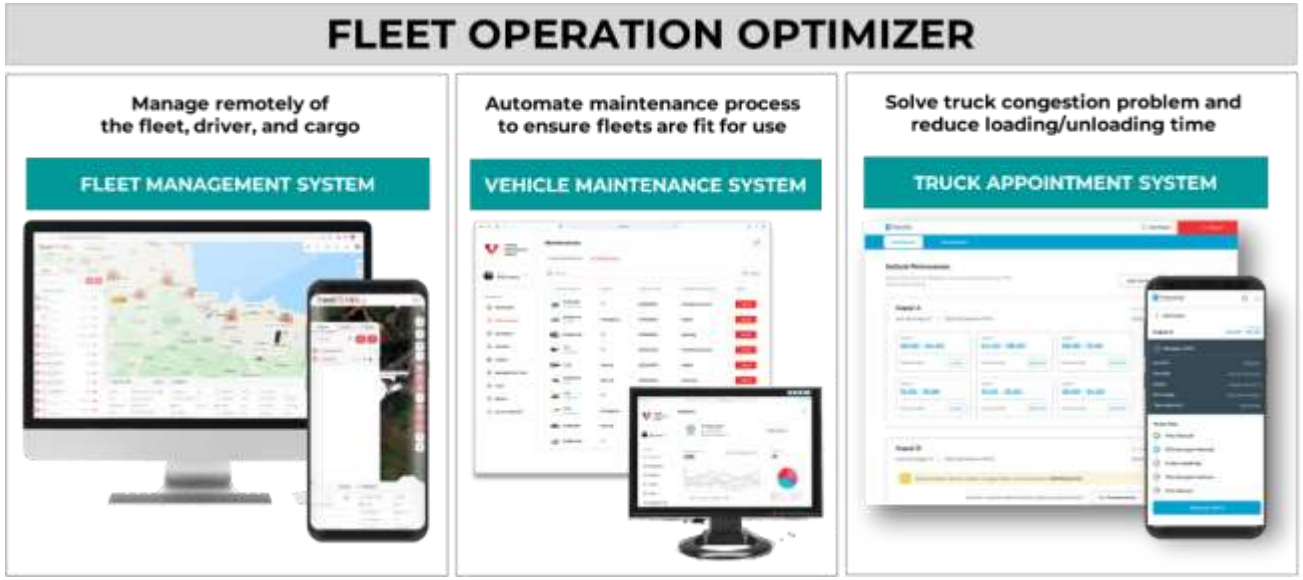
With CBN capability and experience in ICT services, CBN offers you the ability to manage and control your business operations easily and swiftly through CBN IoT solutions

Features

- Customization solution
- Multi various IoT sensors and brand
- Provide Remote Monitoring & Control
- Scalability deployment
- 24x7 *customer support*

Benefit

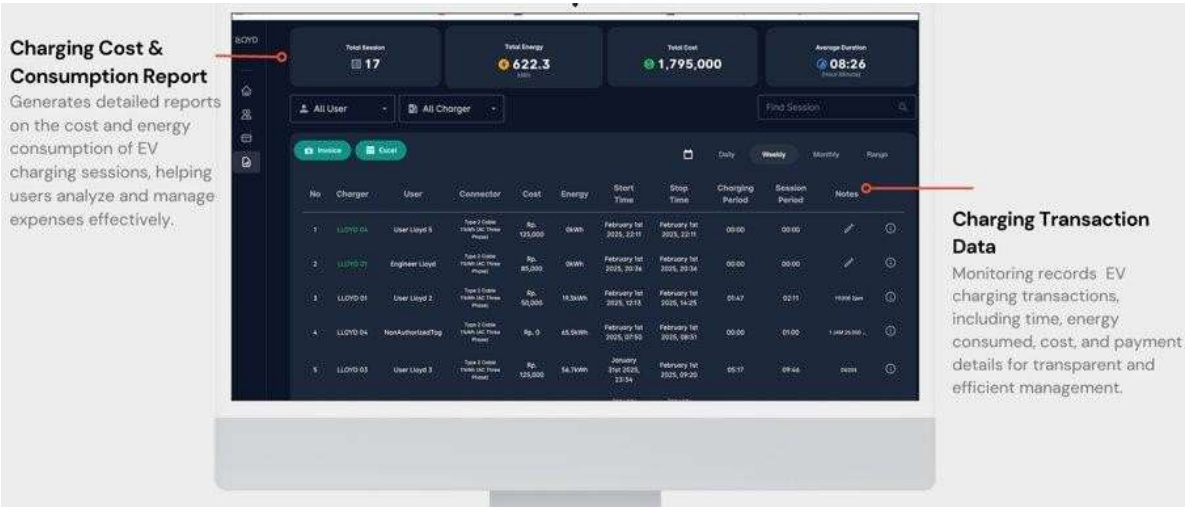
- Real-Time Monitoring & Automation
- Efficiency and Cost Reduction
- Predictive maintenance
- Data driven insight

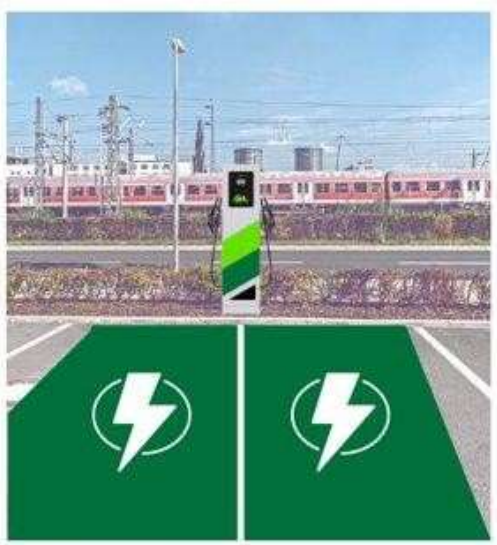


Platform as a Service - EV Charger

CBN is committed to advancing electric vehicle charging solutions (EV Chargers) and smart power utilities to accelerate the transition toward clean energy.

We deliver reliable, efficient, and sustainable charging infrastructure, complemented by intelligent energy solutions designed for residential, commercial, and industrial needs.





Platform as a Service - Solar Panel

By harnessing the power of the sun, CBN Solar Energy System helps reduce dependency on conventional energy sources, contributing to environmental sustainability while cutting down on energy costs.

- **Energy Efficiency**: Optimizes solar energy usage, reducing reliance on non-renewable energy sources. .
- **Cost Savings**: Lowers electricity bills by using solar power, especially in areas with high sunlight exposure.
- **Environmental Sustainability**: Supports green energy, helping reduce carbon footprints and contribute to a cleaner environment.
- **Smart Control**: Offers a smart monitoring and control system to ensure the optimal performance of solar panels, making energy management more efficient.
- **Long-Term Investment**: Provides long-term savings and returns on investment by reducing energy costs and increasing property value

Platform as a Service - CBN Colocation

The **CBN Colocation** (operated by **NEX Data Center Indonesia**) provides world-class, premium Tier 3 data center services in Indonesia, focusing on resilient infrastructure and carrier-neutral connectivity. CBN Colocation offers flexible server hosting solutions, ranging from half-rack space to fully customized secure cages and suites. All packages guarantee a high level of service availability and include basic remote support.

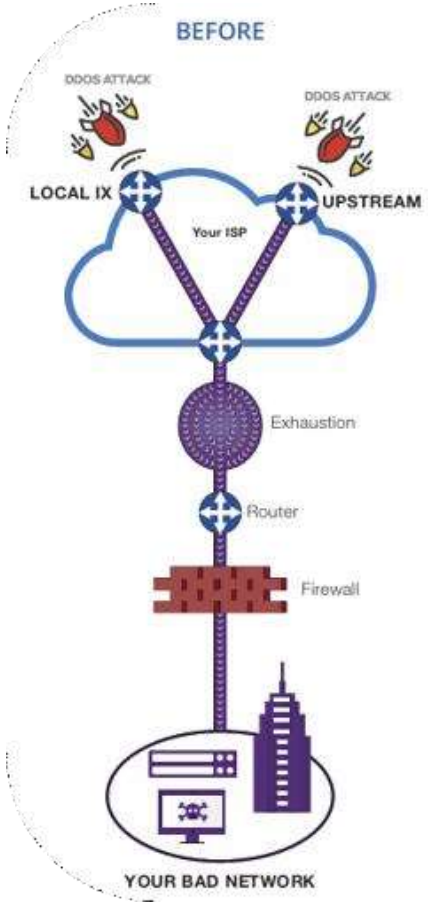
Digital Services

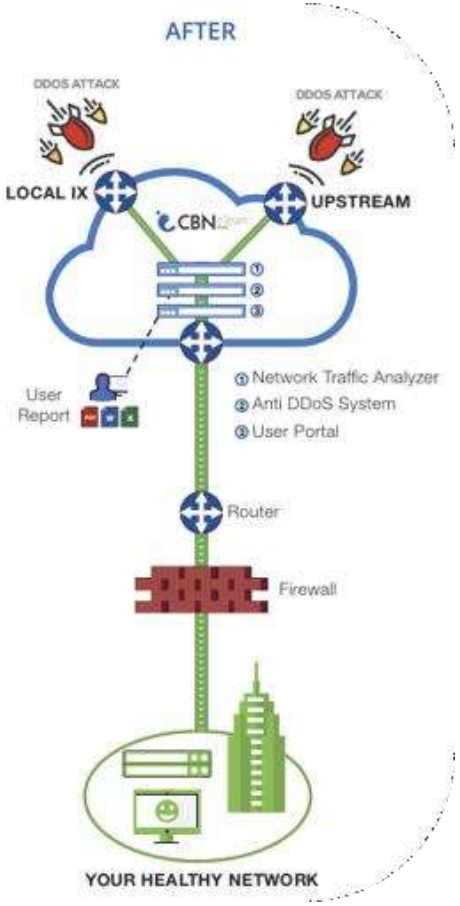
CBN Digital Services offer a suite of technology-based solutions designed to help businesses **improve operational systems**, **enhance security**, and **drive innovation**. These services enable clients to focus on their core competencies by leveraging CBN's reliable infrastructure and expertise.

Security as Service - CBN Anti DDoS

CBN Anti-DDoS Service is a system or solution designed to detect, prevent, and mitigate Distributed Denial of Service (DDoS) attacks.

By utilizing CBN Anti-DDoS service, the network connectivity provided by CBN will be protected against DDoS attacks and shielded from all other types of DDoS threats particularly volumetric DDoS attacks





ANALYZE

Rigorously screens and stops all security threats at the core-router level from the ISP side, before they even reach your network.

MANAGE

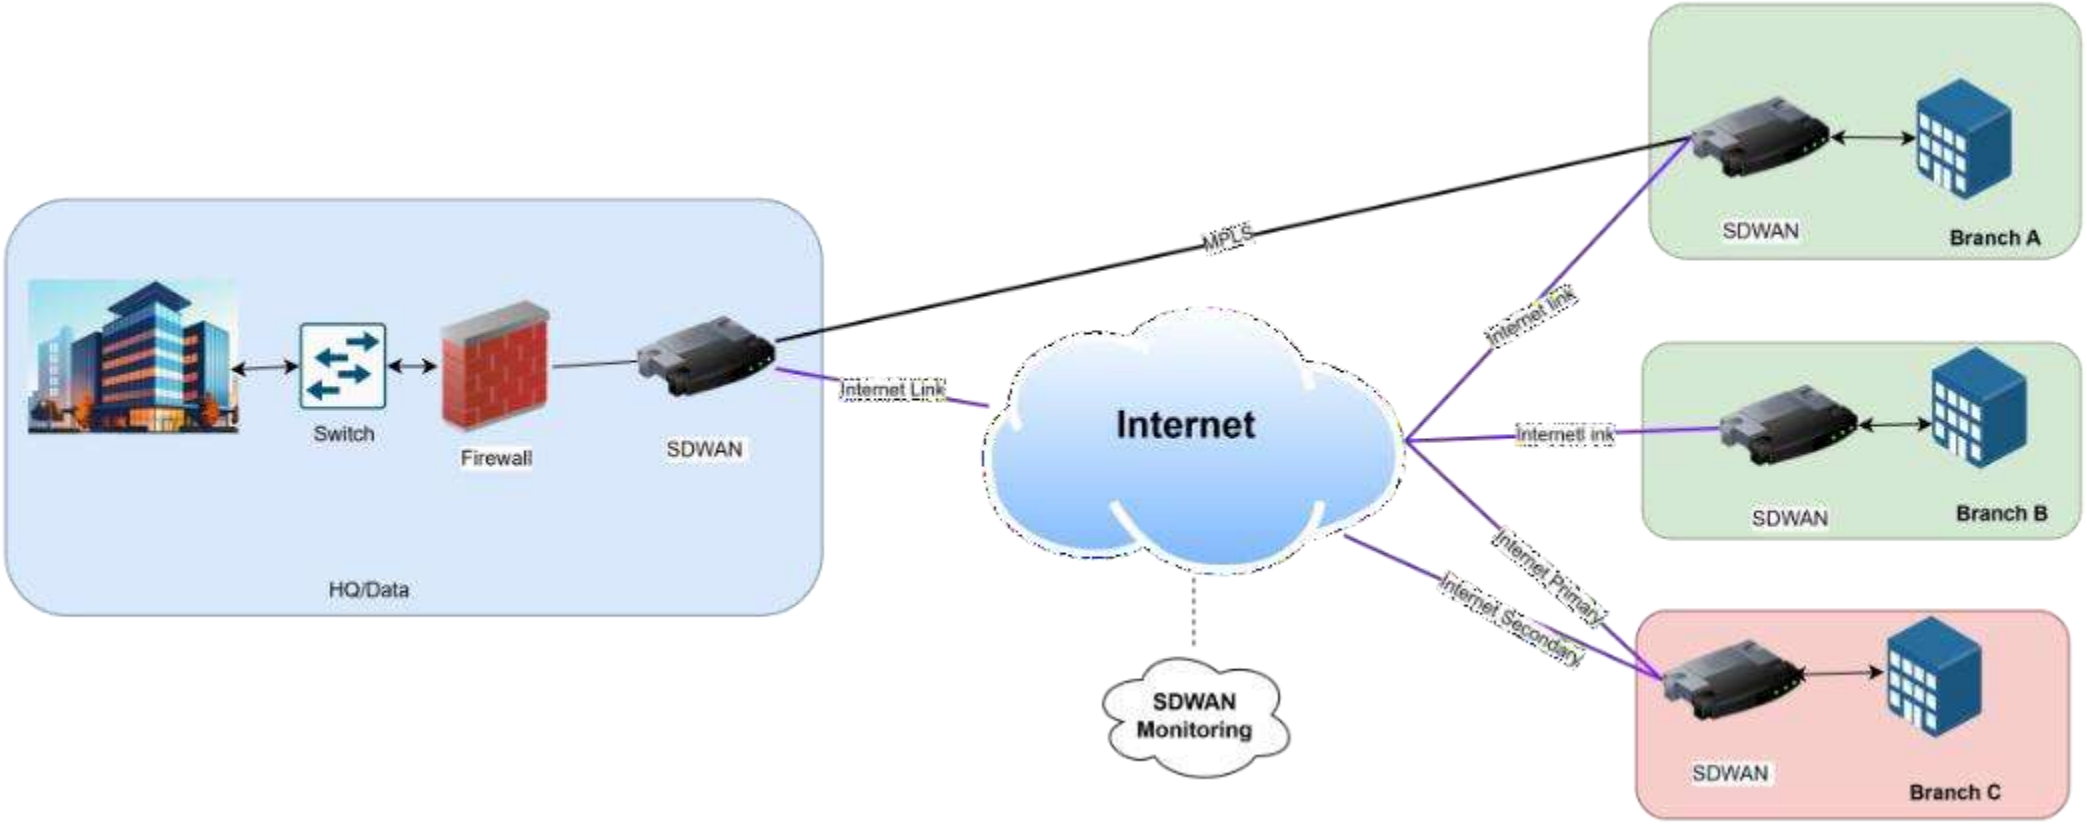
Provides comprehensive round-the-clock protection by performing detailed flow analysis with proactive real-time detection and mitigation.

PROTECT

Ensures business continuity in the face of network threats, while securing your strategic assets and brand reputation against damage.

Security as Service - CBN SDWAN

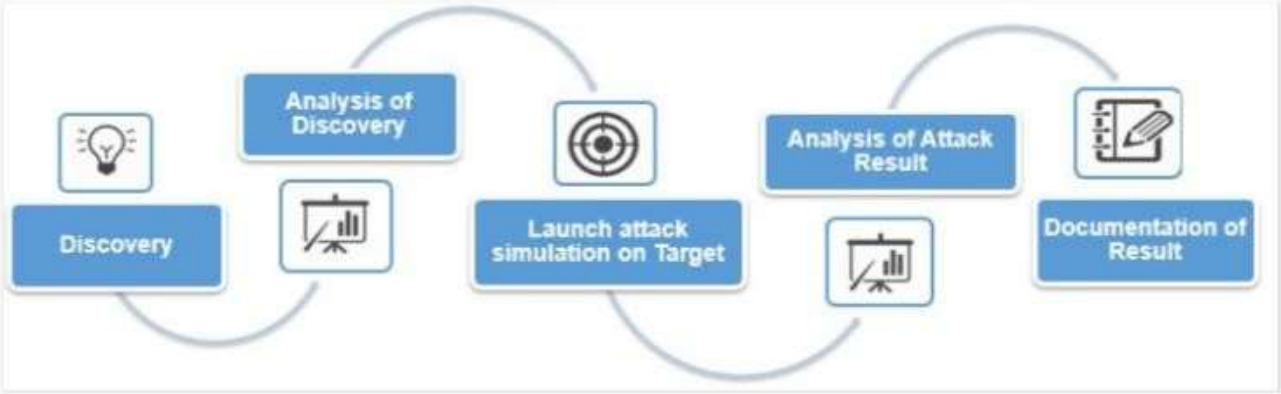
SD-WAN is a software-defined networking technology that intelligently manages WAN connectivity, offering a more flexible alternative to traditional methods like MPLS for connecting branch offices to headquarters or data centers. By separating network hardware from its controller, SD-WAN simplifies network management and operations, and it can utilize various connection media—including wireless WAN, internet, private MPLS, and cellular networks—to link branch locations to data centers through cloud services.



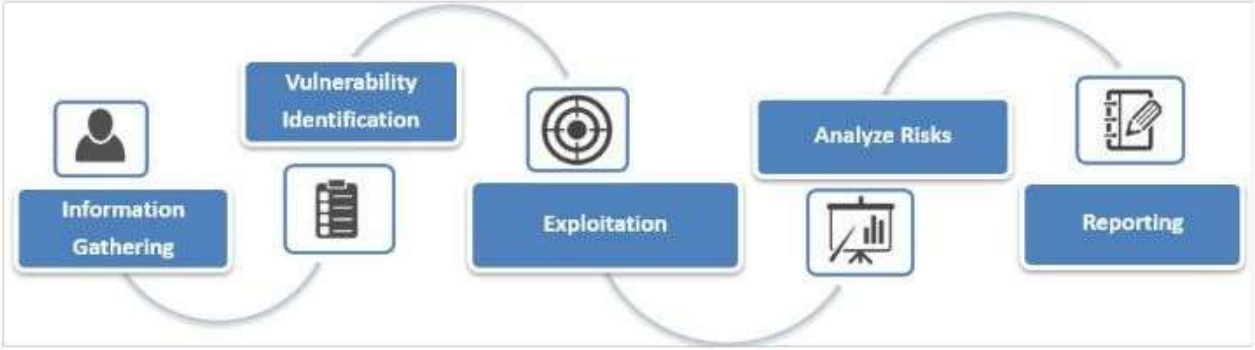
Security as Service - CBN Pentest

CBN Pentest is a professional service offered by CBN to simulate potential attacks on the network of a specific organization or company in order to identify vulnerabilities within the system. The primary goal of this service is to uncover weaknesses in the infrastructure or application. This activity is also part of the compliance process mandated by regulators for institutions in Indonesia's financial sector

Testing Approach - Application



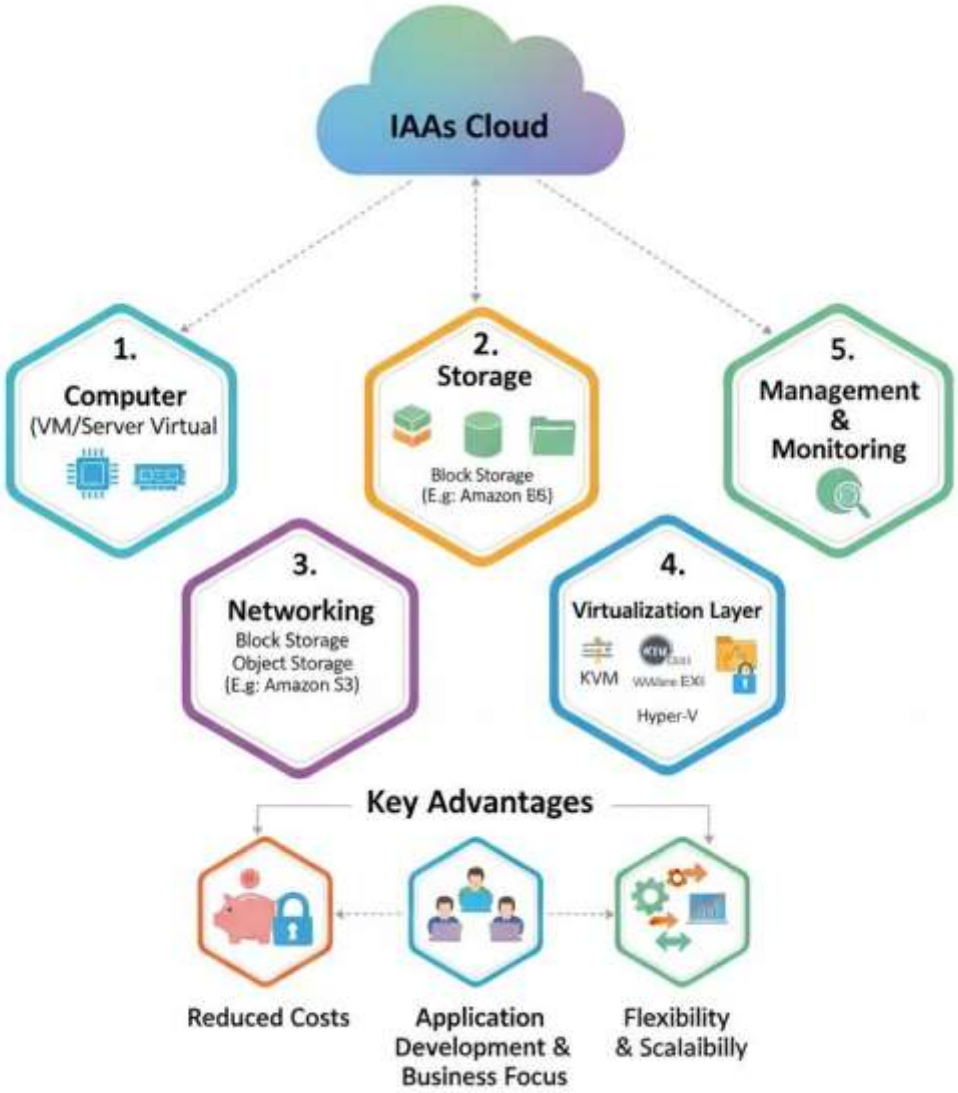
Testing Approach - Infrastructure



CBN Infra as Services

Infrastructure as a Service (IaaS) is a cloud computing service model that provides basic IT infrastructure resources over the internet, using a rental and pay-as-you-go system.
Users gain access to fundamental components such as:

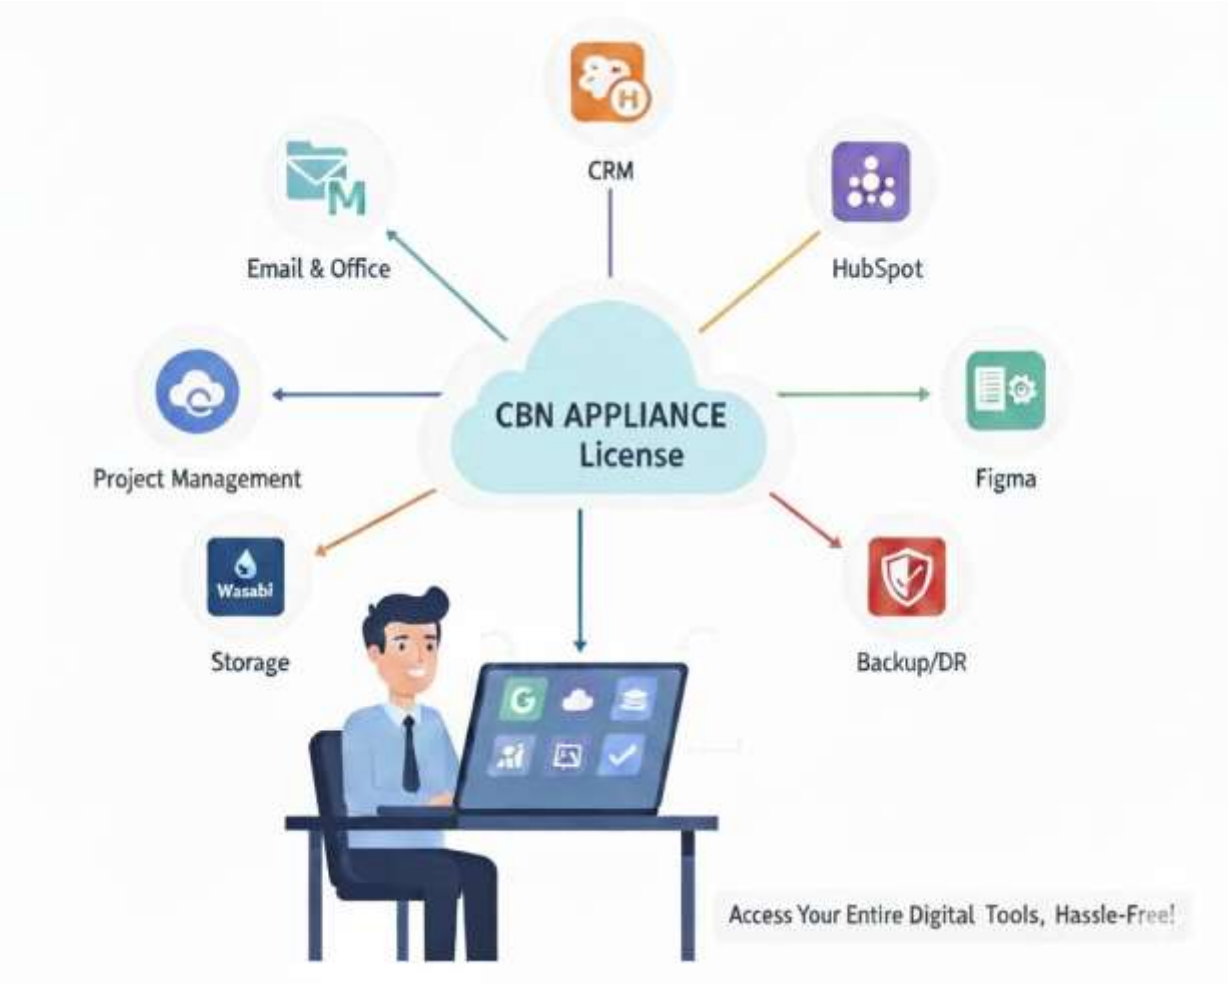
- Virtual Computer (VM/Server): CPU, RAM, and GPU that can be configured flexibly.
- Storage: Storage options like Block storage, Object storage, or File storage.
- Networking: Virtual networks such as Virtual Private Cloud (VPC), load balancers, and virtual firewalls.
- Virtualization Layer: The layer that uses a hypervisor (e.g., KVM, VMware ESXi) to manage physical resources.
- Management & Monitoring: Tools for provisioning, autoscaling, and performance analysis.



CBN Appliance Licenses

The CBN Appliance License model is delivered as a Software as a Service (SaaS) solution, allowing users to access the application directly over the internet—similar to platforms such as Google Workspace or Salesforce.

No complex local installation or server management is required. CBN manages all underlying infrastructure, system maintenance, security, and software updates, ensuring a fully managed and seamless cloud environment. This enables users to focus solely on utilizing the software without operational burdens.



CBN Engineer on Site

CBN Engineer on Site provides dedicated, high-quali technical manpower directly to the customer location.

This service is designed to ensure maximum netwo reliability and operational uptime by offering expe personnel for proactive maintenance, rap installation/deployment, effective troubleshootin and specialized technical assistance. It acts as flexible, scalable extension of the client's ow IT/Network team,
